SUMMARY

Data analyst with hands-on SQL, Python, and Tableau experience, backed by a GIS and DevOps background in structured data, automation, and systems-level problem solving. Independently built and shipped an 12-application web portfolio and a full end-to-end data analysis project — cleaning and modeling 34,000+ records in SQL, visualizing findings in Tableau, and documenting a real data-quality bug found and corrected along the way. Also builds AI-powered workflow tools for small businesses, applying practical prompt design and automation to real operational problems.

SKILLS

Data Analysis: SQL (SQLite), Python, data cleaning, data modeling, exploratory analysis

Visualization: Tableau Public, dashboard design, Excel

AI & Automation: Prompt engineering, AI workflow design, API integration, workflow automation tooling

Web & Tools: JavaScript, HTML/CSS, Git-based workflows, Vercel, GitHub Pages

Background: GIS mapping and spatial data, CI/CD pipelines, containerized environments, infrastructure automation

FEATURED PROJECT

Steam Game Sales & Trends Analysis — Independent Project

2026

- Cleaned and modeled a 34,000+ row Kaggle dataset in SQL, including recursive queries to split multi-value fields into three relational junction tables (600,000+ combined rows)
- Identified and corrected a data-quality bug in a pre-calculated source field affecting roughly half the dataset, verified against raw underlying values before building a corrected replacement metric
- Built and published an interactive 3-dashboard Tableau Public workbook examining 10 correlations across pricing, reviews, genre, and player engagement
- Documented the full process and findings, including an executive summary, in a written report published alongside the live dashboard

EXPERIENCE

Independent Data & AI Projects — Self-Employed

2025 – Present

- Designed and built a 12-application web portfolio (utility tools, AI-assisted tools, and an interactive AI-literacy learning series), deployed via GitHub Pages and Vercel
- Built a custom AI-powered workflow automation tool for small professional services businesses, integrating third-party APIs to identify and automate repetitive manual processes
- Developed a structured 7-step client discovery framework covering workflow assessment, time-investment analysis, and data privacy review

Junior DevOps Engineer — Business Data Inc.

Sept 2018 – Jul 2023

- Supported deployment pipelines, containerized environments, and infrastructure automation as part of a DevOps team
- Worked with structured data and configuration across environments, building a working foundation in systems-level problem solving
- Gained working exposure to containerization and orchestration concepts

Competitive Dancer — West Coast Swing — Self-Directed

2023 – 2026

- Trained and competed at a high level, committing significant time to technical development and performance preparation
- Reached finals in major national competitions, including Jack & Jill Orama, Halloween Swing Thing, and Monterey Swing Fest
- Taught private lessons to beginner dancers, breaking down technique and communicating complex concepts clearly

EDUCATION

B.S., Geographic Information Science and Cartography — University of California, Santa Barbara
